Documentation Memo

My implementation satisfied my conceptualization in where it met the steps necessary to carry out the final request which was to post to a Blackboard Discussion Forum. The implementation did not satisfy my design because instead of using Jing to use screenshots I used the screenshot option that Windows 10 offers. I did not follow through with the usage of InDesign to annotate the screenshots and instead used an online program called szoter. The implementation also failed to use Google Drive to store images and instead used my personal hard drive. I was able to create a PDF document as my Project but failed to provide 4 images and only used 3.

Initial Design Elements	Implementation Approach
Help end-users submit a post to a Blackboard Discussion Forum	Completed
Printed documentation, served as PDF files	Completed
Included 4 screenshots	Included 3 screenshots instead
Use InDesign as a layout software	Failed, as it was too difficult and used Szoter.
Use Jing to capture screenshots	Failed, used Windows screenshot feature
Annotate the screen grabs	Completed

I used the Windows 10 feature of screenshot, Google Drive to host my documents, github to host my sources, Szoter to annotate my images.
